

# Together,

we can unlock their potential and help today's students become the science and technology leaders of tomorrow. Share your experience with the children in your community.

Help *unlock*  
the potential in  
every child

– in your community.

Today's students are the technology leaders of tomorrow. Ensuring that they are prepared to compete in an ever changing world is more important now than ever. A solid foundation in mathematics and science is essential and can provide life-changing stepping stones to a world of endless possibilities.

A World In Motion® (AWIM) is a teacher-administered, volunteer-assisted program that brings science, technology, engineering and mathematics (STEM) education to life for students in grades K-12. Benchmarked to the national standards, AWIM incorporates the laws of physics, motion, flight and electronics into age-appropriate hands-on activities that reinforce classroom STEM curriculum.

[www.awim.org](http://www.awim.org)

# Since 1990:

- Over 4 million students have participated in the AWIM program in all 50 U.S. states and 10 Canadian provinces and territories
- More than 65,000 activity kits have been provided to teachers and volunteers
- Over 20,000 engineers, scientists and technology professionals have volunteered in partnership with AWIM

Through the support of corporations, foundations, volunteers, SAE members and the SAE Foundation, students discover the exciting application of science principles, work as a team and apply creative problem solving while they learn about rewarding engineering, science and technical careers.

There are many ways that corporations and individuals can influence the ways in which youth are prepared to meet the future. Financial support of the SAE Foundation can help schools qualify to receive complimentary or low cost AWIM Challenge kits.

# *volunteer*

Share your experience with the students in your community and volunteer. Volunteering for A World In Motion is a great way to serve as a steward for your chosen profession and play an important role in the development of tomorrow's science and technology leaders.
